

PRESS RELEASE

## **CYBEROO INTRODUCES ORBIS, THE INTEGRATED MODEL FOR MANAGING CYBER RISK IN THE EUROPEAN MID-MARKET**

### **A unique ecosystem integrating threat management, processes, governance, compliance, and people security for European businesses**

Reggio Emilia, May 27, 2026 - Cyberoo S.p.A. ("Company"), an innovative SME listed on Euronext Growth Milan and specializing in cybersecurity for businesses, presents **ORBIS**, the new strategic and operational model through which the Company organizes its offerings into an integrated ecosystem for cyber risk management.

ORBIS integrates the Group's four operational areas: Threat Management through the Cybersecurity Suite; governance of processes via Cyberoo Docetz; regulatory and legal compliance with Titaan; and security awareness and people training through Keatrix.

The model was created in response to a structural transformation in the cybersecurity market: for many companies, the main challenge is no longer simply gaining access to technologies, but rather the ability to consistently govern tools, processes, skills, compliance, and security-related decision-making.

In this context, ORBIS enables the integration of the various components of the Cyberoo offering into a single cyber risk management model, designed to overcome fragmentation across solutions, vendors, and specialized expertise, while improving companies' decision-making capabilities and reducing operational complexity.

The model is specifically designed for European mid-market companies, which face increasingly sophisticated threats, growing regulatory obligations, and greater organizational complexity, often without the internal structures typical of large enterprises.

ORBIS therefore represents the natural evolution of Cyberoo's positioning: from a specialized vendor of cybersecurity solutions and services to a partner capable of supporting companies through a broader journey of integrated cyber risk governance across the entire lifecycle of prevention, protection, response, compliance, and training.

The new business strategy was presented at the "Black Club - Partner Conference 2026", Cyberoo's traditional annual event dedicated to its network of partners and distributors. The 2026 edition confirmed the ongoing strengthening of Cyberoo's international channel footprint, with active participation from partners across Italy, Spain, and Poland.

During the event, academic and scientific contributions were shared on the evolution of cyber risk from economic, organizational, and cognitive perspectives. Notable speakers included Elena Prodi, a researcher and professor of Economics at the University of San Raffaele in Rome and Cimet; Enrico Lorenzi, a psychologist and trainer; and Martina Ardizzi, a researcher and professor of Neuropsychology at the University of Parma.

**Veronica Leonardi, CMO & Board Member of Cyberoo**, stated: *"ORBIS represents an important step in the evolution of our market offering. Companies no longer need just new technologies, but models capable of reducing complexity, integrating diverse*

*expertise, and transforming cybersecurity into a structural element of corporate governance. With ORBIS, we bring together Cyberoo's core areas of expertise—threat management, processes, compliance, and the human factor—into a single, scalable model tailored to the European mid-market. The response from partners at our Conference confirms that the market is ready for a more integrated approach, capable of connecting technology, AI, specialized expertise, and risk management in a concrete and operational way.”*

With ORBIS, Cyberoo strengthens its position as a European player specializing in integrated cyber risk management for businesses, confirming its growth strategy through the channel, the evolution of its proprietary portfolio, and the development of an increasingly scalable and international ecosystem.

**Cyberoo S.p.A.**, a company listed on Borsa Italiana's Euronext Growth Milan, is an innovative SME based in Emilia-Romagna that specializes in cybersecurity for businesses. This approach goes beyond simply protecting IT systems from external attacks; it involves developing a comprehensive strategy capable of protecting, monitoring, and managing information within the IT ecosystem. Cyberoo targets the mid-market with a broad and deep portfolio of enterprise solutions, developed using the most advanced technologies and supported by a value chain that allows the company to offer prices aligned with this market's budget constraints.
